Project Title: Brat Album Website

I'd like to build this site as a super dynamic single page website, that shifts and animates as you scroll through it. While there is plenty of content, since it is a single album I think it would work better as one main page.

- Home Page/Introduction—Introduce basic point I want to get across about Charli XCX's album, release, and genre. Set the tone for greater impact and artistic choices.
- Background and release
- Composition/Track List
- Artwork and Marketing
- Impact/Commercial Receptance, Involvement with Kamala Harris campaign
- Sources – just listed at the end, small without bells & whistles.
